Freezes over and the refrigerator portion gets hot

2 days ago

The drain plug in the freezer constantly gets plugged by ice and freezes over. This blocks the airflow to the refrigerator and food gets spoiled. Tilting the fridge more towards the drain does not alleviate the problem. In order to fix it you need to defrost the entire freezer and clean out the ice blocking the vent. Terrible design and terrible quality.

Problems with the refrigerator

24 days ago

I bought this a month ago at Best Buy, and have had some problems. First Best Buy never offered door swing direction preference. When I requested door swing switch, I was told an additional \$80 charge. I chose to do the switch myself instead, which resulted in door gasket not sealing tight, causing stuff inside the refrigerator "sweating". I have to put a door stopper to force the door shut tighter. Also, for some reason, there is a lot of frost in the freezer, although the freezer door gasket seals much better than the lower fridge. I'm wondering if I could request for a replacement.

No, I do not recommend this product.

Constant frosting issues- stay away

30 days ago

Fridge is a little over 3 years old now and has had a constant issue with the coils freezing up and water dripping into the refrigerator area. It is about every two months that an overnight defrost is required, or I remove back panel and use hot water to thaw the ice and assure drain line is open. Very frustrating as this has been happening since the unit was new and still under warranty. The techs advice was not to put too much in the freezer and that was it.

Freezing up and leaking water then not cooling.

2 months ago

Read the reviews about water leaking into the fridge and eventually stop cooling. Seems this is a common problem with this unit freezing up everywhere behind the panel on the coils and inside the panel AND fills up the space that needs to be clear to cool your fridge. I also had to read youtube videos to see how to resolve the issue. You have to unplug the fridge, remove the panel in the freezer and pour hot water on the coils (which will drain into your fridge). You also have to melt the ice INSIDE the panel. I just spent 3 hours on this and regret to hear that it most likely will happen again! The ice build up possibly happened because as one of the reviewers mentioned, the freezer door pops open when you close the fridge. I didn't notice this for some time. Also, I am going to make sure that the unit in the top back of the fridge is clear so that the air can flow. Good luck every one!

Freeing Problems

Freezer coils ice up consistently

This refrigerator came with the house I bought in 2022, but it was manufactured in 2021. For the past year or so it consistently freezes the freezer coils, causing water to drip down into the refrigerator and eventually the refrigerator stops cooling altogether. I've defrosted all the coils manually at least four times Yet it continues to have the same problem. It is not worth the effort and my research shows that this is not a problem unique to me.

Please do not buy this refrigerator!!! We have had this fridge for about a year. Nothing but problems, ice buildup, water leaking, fridge not cooling. It has lost me 1000's of dollars in groceries as I have payed to have ir repaired 3 times all for the same issue to occur. The temperatures do not regulate. Overall you are much better off finding another fridge!
